

SIM5300E_JD_Application Note

Document Title:	SIM5300E_JD_Application Note
Version:	1.00
Date:	2016-12-21
Status:	Release
Document Control ID:	SIM5300E_JD_Application Note_V1.00

General Notes

SIMCom offers this information as a service to its customers, to support application and engineering efforts that use the products designed by SIMCom. The information provided is based upon requirements specifically provided to SIMCom by the customers. SIMCom has not undertaken any independent search for additional relevant information, including any information that may be in the customer's possession. Furthermore, system validation of this product designed by SIMCom within a larger electronic system remains the responsibility of the customer or the customer's system integrator. All specifications supplied herein are subject to change.

SCOPE

This document describes how to use the Jamming Detection function of SIM5300E through AT commands.

Examples are also given for reference.

This document can be used for SIM5300 serial modules, like SIM5300E.

This document is subject to change without notice at any time.

SIMCOM CONFIDENTIAL FILE

1. DISABLE JAMMING DETECTION

Demonstration	Syntax	Expect Result
Switch off jamming detection.	AT+SJDR=0	OK
Query status.	AT+SJDR?	
Jamming detection is disabled currently.		+SJDR: 0

2. ENABLE JAMMING DETECTION

Demonstration	Syntax	Expect Result
Enable jamming detection, the status can be only queried by reading command.	AT+SJDR=1,0	OK
In a jamming environment.		
Query status.	AT+SJDR?	
Jamming is detected.		+SJDR: 1,0,255,0,1
In normal condition.		
Query status.	AT+SJDR?	
No jamming.		+SJDR: 1,0,255,0,1
Enable jamming detection, the status will be reported via URC periodically.	AT+SJDR=1,1	OK
The URC will be reported automatically every 3 seconds		+SJDR: JAMMING DETECTED //Jamming is detected ... +SJDR: NO JAMMING //No jamming ... +SJDR: INTERFERENCE DETECTED //Interference is detected ... +SJDR: NO JAMMING //No jamming ...

<p>Enable jamming detection, the threshold is 255, and the URC is reported only when jamming status is changed.</p>	<p>AT+SJDR=1,1,255,1</p>	
<p>The URC will be reported automatically only when the status changed.</p>		<pre>+SJDR: JAMMING DETECTED //Jamming is detected +SJDR: NO JAMMING //No jamming +SJDR: JAMMING DETECTED //Jamming is detected +SJDR: NO JAMMING //No jamming +SJDR: INTERFERENCE DETECTED //Interference is detected +SJDR: NO JAMMING //No jamming +SJDR: INTERFERENCE DETECTED //Interference is detected.</pre>
<p>Enable jamming detection, the threshold is 255, and the URC is reported every 3000ms.</p>	<p>AT+SJDR=1,1,255,0</p>	<p>OK</p>
<p>The URC will be reported automatically every 3 seconds.</p>		<pre>+SJDR: JAMMING DETECTED //Jamming is detected ... +SJDR: NO JAMMING //No jamming ... +SJDR: INTERFERENCE DETECTED //Interference is detected ... +SJDR: NO JAMMING //No jamming ...</pre>

Check the status of the PIN to get the jamming result.	AT+SJDR=1,2	OK // in mode 2
the jamming would be indicated both through serial port and the PIN.	AT+SJDR=1,3	OK //in mode 3
