

SIM7020G

NB-IoT(Cat-NB2) Module

Product Description

The SIM7020G is Global-Band NB-IoT (Cat-NB2) module solution in a SMT type .

It has strong extension capability with rich interfaces including UART, SPI,I2C, GPIO etc. The module provides much flexibility and ease of integration for customer's application.

The package (LCC part) of SIM7020G is compatible with SIM800C (2G module with LCC package). This also maximizes the investments of customers, and enables a short time-to-market.

It is designed for applications that need low latency, Low throughput data communication in a variety of radio propagation conditions. Due to the unique combination of performance, security and flexibility, this module is ideally suited for M2M applications, such as metering, asset tracking, remote monitoring , E-health etc..
